Guidelines for Peer-Review – ITC C508

Instructions for Peer Reviewers: For each work under review, please provide detailed feedback in the Canvas module's assignment comments section (see figure 1). In your feedback, aim to write two or more paragraphs for each submission. These paragraphs should describe both the strengths and weaknesses observed in the work. Additionally, offer constructive suggestions on how the work can be enhanced. Furthermore, articulate any valuable insights gained from the review that can be applied to your own work.

You can use the following criteria as initial basis for commenting

|	Criteria
1	**Focus**: Was the report submitted clear and relevant to the problem given for the task?
2	**Content**: Was the report contents sufficiently long to explain the topics and steps taken thoroughly. All questions that need to be answered were answered completely. All report requirements were complied with.
3	**Presentation**: Is the report well formatted, makes use of introduction page, different heading levels, border, etc. Relevant media was also used and embedded in the report to support arguments.
